

## J. J. Keller® ELD Switched Power Adapter Installation Guide

1. If the ELD (**A**) is already installed in the vehicle, disconnect the ELD Connection Cable (**B**) from the Y-Adapter (**C**).
2. Locate a +12V source of battery power in the cab (fuse block, power block, etc).
3. Connect the **RED** wire from the Switched Power Adapter (**D**) to the +12V battery source.
4. Insert the Switched Power Adapter (**D**) between the ELD Connection Cable (**B**) and the Y-Adapter (**C**), confirming a good connection to both.
5. Verify that the **GREEN** light on the front of the ELD continues to blink when the vehicle ignition is in both the "on" and "off" positions.
6. Secure all excess cable with wire ties to ensure safe vehicle operation.

Drawing is not to scale.
